BUSINESS INSIGHTS REPORT

SkillCraft Technology Internship • Task 04: Exploratory Data Analysis (EDA)

Objective

To examine the sample marketing campaign data, summarize the marketing funnel, and compare channels using spend, revenue, and return on investment (ROI).

Marketing funnel overview

Metric	Total
Impressions	11,624,555
Clicks	394,168
Conversions	25,422
Click-through rate (clicks ÷ impressions)	3.39%
Conversion rate (conversions ÷ clicks)	6.45%

Channel performance

Marketing channel	Spend (approx.)	Revenue (approx.)	ROI
Affiliate	90,296.74	425,789.8	372%
Email	139,415.5	509,426.9	265%
Google Ads	98,350.33	350,750.8	257%
LinkedIn	128,423.1	665,081.2	418%
Meta Ads	65,394.72	412,845.0	531%
Organic	111,037.1	426,282.4	284%
TikTok	99,352.4	338,118.5	240%

Key insights

• **Meta Ads** has the highest ROI in the summary (about 531%), suggesting the strongest return relative to its spend.

• **LinkedIn** generates the highest revenue in the channel summary (about 665,081), with ROI of about 418%.

• **TikTok** has the lowest ROI among the listed channels (about 240%), though its ROI is still positive based on the table.

• The overall funnel click-through rate is about 3.39%, and about 6.45% of clicks result in conversions. These rates can help monitor engagement and conversion performance.

Recommendations

• Review Meta Ads campaigns to identify which creatives, audiences, and placements are driving efficient returns; consider carefully testing additional budget.

• Study LinkedIn’s revenue-generating campaigns and check whether the higher spend is justified by business goals.

• Investigate TikTok campaign targeting and creative performance, and run controlled tests before making large budget changes.

• Track CTR, conversion rate, spend, revenue, and ROI regularly. Compare results over the same time period before reallocating budgets.

Note: Channel spend and revenue are transcribed from the visible Excel summary and rounded as displayed. Confirm exact values against the final workbook before submission. ROI is calculated as (Revenue – Spend) ÷ Spend × 100.
